NED National Endoscopy Database

National Endoscopy Database (NED) Overview

Part of the JAG programme at the RCP

JAG Joint Advisory Group on GI Endoscopy

Royal College of Physicians

Background and aims

Comprehensive and reliable data on endoscopy are crucial to:

Service provision

Quality assurance

Research

NED aims to collect prospective data from all endoscopy units in the UK and automate the transfer of key data from local endoscopy reporting system (ERS) to national endoscopy database (NED).

Governance and support

NED is funded by JAG and backed by the following organisations:

NED National Endoscopy Database

Data output

- The data output is based on JAG and BSG quality assurance standards and key performance indicators (KPIs)
- Presented to users in a dashboard format
- Integrates with JAG accreditation process and GRS audits
- Latest iterations integrate with JETS to avoid manual input of procedures
- Users can only access their own data
- Local, regional and national administrators will be able to view data from within their organisation or region.

NED and JETS

JETS JAG Endoscopy Training System

- JETS (JAG Endoscopy Training System) is an electronic portfolio where evidence of training in endoscopy may be recorded. Engagement with JETS is a prerequisite for UK endoscopy certification.

- The NED has been designed to link directly with JETS database, which means that the data uploaded into NED will also be uploaded into JETS, so trainees will no longer need to manually add procedural data into JETS. This integration will eliminate the risk of trainee bias by increasing the reliability of procedural records.

NED National Endoscopy Database

Information governance

The NED working group have met with:

- NRES
- Information Commissioner's office
- Confidentiality advisory group

NRES, ICO and CAG have all approved the project and recommended no individual patient consent is necessary.

As part of the process, Caldicott approval must be obtained locally.

Endoscopist involvement

Only you and your organisation's quality assurance lead will be able to see your data.

Your professional body code will be used to identify you.

If you would like to opt-out of your data being collected, please contact your NED lead.

NED data may be used for service evaluation and research purposes. Endoscopist identifiers (professional body codes) would be anonymised.

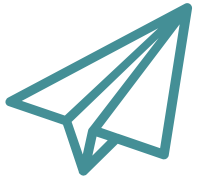

You will be able to see your data on an interface similar to JETS. You will need to register for this if you are not already registered with JETS.

Questions

Please contact the NED team if you have any questions

askJAG@rcp.ac.uk.

We also have user video guides and FAQs available on the website.
